

Uvodnik

Spoštovani bralci in avtorji, po nekaj letih je pred vami nova tiskana izdaja revije Acta hydrotechnica. Bralci naših prejšnjih izdaj bodo zagotovo opazili, da je tiskana izdaja drugačna, v bolj sodobni obliki. Nekoliko smo prenovili tudi spletno stran in izdajo revije.

Novo uredništvo in izdajateljski svet sta v soglasju z izdajateljem revije spremenila tudi način objavljanja člankov. Acta hydrotechnica je postala odprtodostopna, kljub temu pa objava še vedno ni plačljiva. Namesto nekdanje polne dvojezičnosti zdaj v reviji objavljamo članke napisane v slovenskem ali angleškem jeziku z izvlečkom in napisi k slikam in preglednicam v obeh jezikih. S tem želimo k objavljanju v Acti hydrotechnici vzpodbuditi tudi avtorje iz tujine in hkrati poenostaviti pisanje, recenzijo in objavo prispevkov. Poslanstvo revije se seveda ni spremenilo: še vedno objavljamo prispevke s področij hidrologije, hidravlike, mehanike tekočin, hidrotehničnega inženirstva in drugih področij povezanih z vodo in okoljem. Najvišjo mogočo kakovost objavljenih člankov zagotavljamo z najmanj dvema neodvisnima recenzijama in jezikovnim pregledom vsakega prispevka.

Zahvaljujemo se vsem avtorjem, ki so svoje znanje delili z nami in širšo strokovno javnostjo prek naše revije. Vljudno jih vabimo k nadaljnjemu sodelovanju. Prav tako se zahvaljujemo recenzentom, ki so s svojim časom, znanjem ter dragocenimi napotki in predlogi pripomogli k visoki znanstveni in strokovni ravni revije. Ne nazadnje se zahvaljujemo še našemu kolegu Gašperju Mraku, ki je oblikoval novo naslovnico revije.

Brez novih prispevkov pa revija, kljub najboljšim namenom uredništva in izdajatelja, ne more obstati. Zato vas, spoštovani bralci, še enkrat prijazno vabimo, da pošljete prispevke, s katerimi boste predstavili svoje aktualne dosežke s področja vodarstva, hidrotehnik in okoljskih znanosti.

Uredništvo

Editorial

Dear readers, dear authors, after a few years a new printed edition of the journal Acta hydrotechnica is in front of you. As the readers of our previous volumes will notice, the printed version of the journal has a new design. Recently, the journal web page and the online edition have also been slightly changed.

The new editorial board and editors have, in agreement with the publisher, changed the policy of the journal, which is now open-access but still free of charge. Moreover, instead of remaining a fully bilingual journal, we now accept manuscripts in either English or Slovenian language with abstracts and captions in both languages. In this way we want to encourage authors from abroad to publish their recent work in our journal and to simplify the writing, reviewing and publishing processes. The dedication of the journal, however, has not changed. We continue to publish articles from the fields of hydrology, hydraulics, fluid mechanics, hydraulic engineering and other fields connected to water and environment. In order to provide the highest possible quality of published work, all manuscripts have to pass a thorough peer review and proofreading.

We are grateful to the authors who shared their knowledge with us and with the wider professional public through the recent volumes of the journal. We kindly invite them to further collaboration. We also thank all the reviewers who helped to ensure a high scientific and professional level of the journal by donating their time, knowledge, and valuable opinions and suggestions. Last but not least, our colleague Gašper Mrak is gratefully acknowledged for designing the new outlook of the journal.

Despite our best intentions, a journal cannot exist without manuscripts. Therefore, once again, dear readers, you are kindly invited to submit to Acta hydrotechnica your latest achievements in the fields connected to water science and engineering or environment!
